Common Infections (Infections in Reproductive Health Care) [L.G. Keith] on Amazon.com. *FREE* shipping on qualifying offers. Infectious diseases remain a major problem for physicians and other health professionals dealing with problems of the reproductive system. Accordingly Across 183 hospitals and 11,282 patients, 452 patients had one or more healthcare-associated infections. The following list ranks the most common healthcare-associated infections from highest prevalence to least: 1. Pneumonia: 21.8 percent of all healthcare-associated infections. In men, sexually transmitted infections are much more common than endogenous or iatrogenic infections. These different categories of infections are included together in this Guide for several reasons: Prevention of STIs/RTIs and their complications requires a common approach within reproductive health services. Urinary tract infection (UTI) is a bacterial infection of the bladder, urethra, kidneys, or ureters. Respiratory tract infections include sore throat, bronchitis, sinusitis, and pneumonia. Bacteria or viruses may be responsible for respiratory tract infections.
