Beat them and check for smoke. If you were to add a bit of resistance to the wire that goes to the fuel solenoid it might reduce the voltage to low enough that the solenoid will not try to cycle ( chatter ) .The rule of thumb is coils drop out at 80% of rated voltage and pull in at 90%.The problem I had wasn't starting, it was stopping. I bought my G1800 used, but it only had 170 hours on it. The first summer all was well, but then I started having problems getting the shut-off solenoid to activate.
