A computer is a machine that can be instructed to carry out sequences of arithmetic or logical operations automatically via computer programming. Modern computers have the ability to follow generalized sets of operations, called programs. These programs enable computers to perform an extremely wide range of tasks. Computer addiction can be described as the excessive or compulsive use of the computer which persists despite serious negative consequences for personal, social, or occupational function. Another clear conceptualization is made by Block, who stated that "Conceptually, the diagnosis is a compulsive-impulsive spectrum disorder that involves online and/or offline computer usage and consists of at ... Cognitive psychology became of great importance in the mid-1950s. Several factors were important in this: Disatisfaction with the behaviorist approach in its simple emphasis on external behavior rather than internal processes.; The development of better experimental methods.8. Summary: Across 33 rich countries, only 5% of the population has high computer-related abilities, and only a third of people can complete medium-complexity tasks. One of usability's most hard-earned lessons is that you are not the user. This is why it's a disaster to guess at the users' needs. Since designers are so different from the majority of the target audience, it's not just ...
